

PS-1DN Power Supply Installation

The **PS-1DN** is a redundant, hot-swappable power supply for the **VS-3232DN** and **VS-6464DN** Matrix Switchers. The switchers are able to continue to operate with a minimum of one (**VS-3232DN**) or two (**VS-6464DN**) power supplies installed.

The **VS-3232DN** is shown as an example, the **VS-6464DN** follows the same principle.

To install a new power supply:

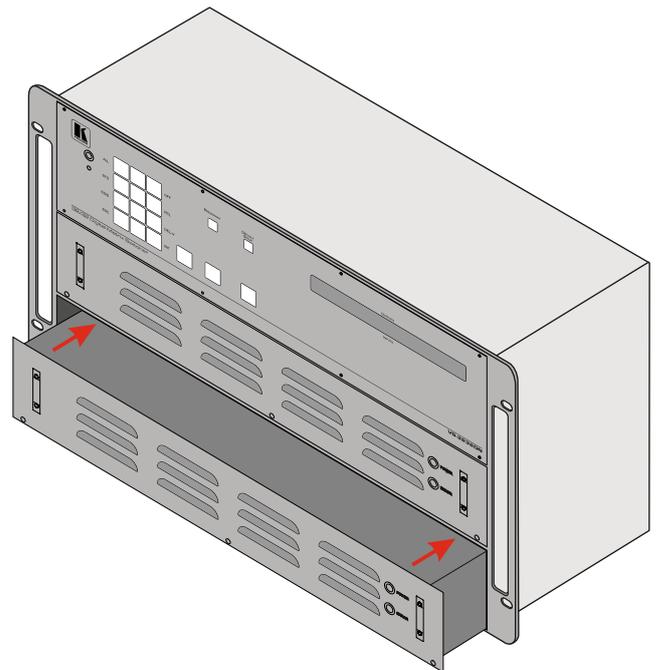

Note: The **VS-6464DN** must have a minimum of two working power supplies to operate correctly.

WARNING: All normal static discharge precaution measures must be observed to prevent damage to the equipment.

1. Remove the new power supply from its shipping box and anti-static bag. Place the packaging including the anti-static bag to one side.
2. Remove the blank panel that covers the location of the new power supply by removing the four thumbscrews.
3. Align the new power supply with the rails inside the space for the power supply and slide it into the chassis. Ensure that you slide the power supply straight within the rails

until it makes contact with the rear connector.

4. Press the power supply firmly into place until the front panel of the power supply is flush with the front panel of the chassis in order to seat the rear connector.
5. Tighten the four thumbscrews.
